

UX Test

Redesigned Product Page

by Iheagwara Augustine

Inspiration & Overview

This redesign was inspired by the IKEA product page (see inspiration link below), chosen for its effective clarity, clean structure, and conversion-focused layout. The goal was to modernize and streamline our product experience.

Inspiration: [IKEA Product Page](#)

Original Mockup: [Visily Mockups](#)

Problems Identified

- Low Add-to-Cart conversion
- Frequent customer support questions about estimated delivery time
- Desire for a visual refresh that stays familiar

How the Redesign Solves Each Issue

Low Add-to-Cart Conversion

- Large, high-contrast Add to Cart and Buy Now buttons.
- Quantity selector beside CTAs for less friction and faster checkout.
- Trust badges, ratings, and reviews next to price/CTA increase confidence.
- Price hierarchy (sale price highlighted, list price de-emphasized).

Delivery Time Clarity

- Delivery estimator placed under price/CTA, visible at decision point.
- Real-time date or date-range estimate for entered postal code, fallback message if needed.
- Conservative auto-estimate always visible for reassurance.

Modern Visuals, Familiar Flow

- Fresh accent color, controlled whitespace, info cards, soft shapes.
- Gallery → Title → Price → Actions order is preserved for returning users.
- Feature icons/tiles let users scan for pros quickly; accordions/tabs keep content neat.

Desktop Mockup

Callouts:

- Large, dominant Add to Cart button.
- Delivery estimator with postal code field.
- Ratings and trust badges beside price/CTA.
- Sale price hierarchy with the old price struck-through.
- Feature/benefit tiles (Comfort, Returns, etc.).
- Accent color for actions and highlights.

Mobile Mockup

Callouts:

- Sticky Add to Cart and Buy Now buttons always accessible.
- Delivery estimator visible in the main product area.
- Quantity adjustment right next to CTA.
- Collapsible/accordion content sections for mobile readability.
- Trust badges placed at the decision point for confidence.
- Comfort/durability/feature icons in prominent position.

Developer Checklist & Implementation Ease

- Components: modular, reusable (ProductGallery, PurchaseCard, DeliveryEstimator).
- DeliveryEstimator connects easily to an API endpoint (GET /api/shipping/estimate).
- All microcopy in English and Hungarian prepared up front for internationalization.
- Design easily mapped to framework components (React, Vue, Angular).
- Accessibility: ARIA labels, color contrast, and focus styles included.
- Error and edge-case handling specified for all interactive areas.
